## A reconstruction of

# Brancker's Table of incomposits 

## (1668)

Denis Roegel

1 November 2011

## 1 Rahn's Teutsche Algebra (1659)

In 1654, the English mathematician John Pell (1611-1685) arrived in Zürich on a diplomatic mission, and came in touch with Johann Rahn (1622-1676). Rahn became Pell's disciple and Rahn thus developed his mathematical activities.

Pell returned to England in June 1658 and in 1659 Rahn published his Teutsche Algebra [15]. It is in this book that Rahn used for the first time the symbol $\div$ for division.

Rahn's book contained a 12-page table giving the smallest factors of all odd numbers not divisible by 5 up to 23999 (figure 1) [15, pp. 37-48]. This table had been computed for Rahn by Balthasar Keller [11, p. 200]. One page covered an interval of 2000 integers, with 20 columns of one hundred.

## 2 The English translation with Brancker's table (1668)

Pell received a copy of Rahn's book in 1660. Two independent translations in English were then started, and Thomas Brancker $(1633-1676)^{1}$ completed his translation in 1665. The translation was then expanded by many additions by Pell [11, p. 306]. Pell in particular encouraged Brancker "to undertake the continuation of the table" [11, p. 200] and Brancker extended the table of factors from 24000 to 100000 . The book was published in 1668 [16]. ${ }^{2}$

Brancker's table gives the smallest factor of all odd numbers not divisible by 5 from 1 to 100000 . Each of the 50 pages corresponds to an interval of 2000 .

The differences between Rahn and Brancker's table are minimal, and concern primarily the positioning of the numbers in the columns. In Rahn's table, the squares of prime numbers were written in a larger type. Brancker chose instead to underline or overline these values, depending on the position of the value with respect to the dividing lines. The solution adopted by Brancker is sometimes confusing, but more visible than Rahn's larger type.

Some errors in the table were found by Wallis [2, p. 491]. A recent errata is given by Peters et al. [14].

## 3 Adaptations of Brancker's table

### 3.1 Chinese tables of factors (1723)

The Chinese Shuli Jingyun encyclopaedia [20] published in 1723 contains a table of factors from 1 to 100000 , which is possibly based on Brancker's table. The layout is however different and the Shuli Jingyun does not give the smallest factor, but a decomposition of each composite number in two factors.

[^0]
### 3.2 Maseres' table (1795)

Brancker's table was faithfully reproduced by Maseres in 1795 (figure 2) [13]. Maseres gave an errata to the table, and it seems therefore that he copied Brancker's table without correcting it.

### 3.3 Italian tables (1796)

The fourth Italian edition of Marie's Lezioni elementari di matematiche published in 1796 [12] contained a table which may well have been taken and adapted from Maseres's book. It is however also possible that this table already appeared in earlier editions, but the source of the table is still very likely to be Brancker's table, either directly, or through Maseres' table [13].

This "Italian table" was reprinted in later editions of Marie's book, as well as in Inghirami's Elementi di matematiche published in 1832 [8]. Inghirami's book had a second edition in 1841 [9] and the table was eventually published alone in 1919, under Inghirami's name, although he was not the author of the table.

### 3.4 Hinkley's table (1853)

In 1853, Hinkley also faithfully reproduced Brancker's table, but only from 20000 to 100000 , with a slightly different formatting, and with an additional line giving the count of the primes in each hundred [7]. We have not reproduced this variant of Brancker's table in our reconstruction of Hinkley's table.

Figure 1: Excerpt of Rahn's table (1659) [15].

Figure 2: Excerpt of Brancker's table reproduced by Maseres (1795) [13].

## References

The following list covers the most important references ${ }^{3}$ related to Brancker's table. Not all items of this list are mentioned in the text, and the sources which have not been seen are marked so. We have added notes about the contents of the articles in certain cases.

[^0]:    ${ }^{1}$ A short biographical note on Brancker can be found in the correspondence of John Wallis [2, p. 618].
    ${ }^{2}$ More details on the translation and the correspondence between Pell and Brancker can be found in Scriba's article [21].

[^1]:    ${ }^{3}$ Note on the titles of the works: Original titles come with many idiosyncrasies and features (line splitting, size, fonts, etc.) which can often not be reproduced in a list of references. It has therefore seemed pointless to capitalize works according to conventions which not only have no relation with the original work, but also do not restore the title entirely. In the following list of references, most title words (except in German) will therefore be left uncapitalized. The names of the authors have also been homogenized and initials expanded, as much as possible.

    The reader should keep in mind that this list is not meant as a facsimile of the original works. The original style information could no doubt have been added as a note, but we have not done it here.
